Files Needed

?:\Softdent*. * excluding Images folder

Need software and license disks if available.

Disclaimer:

The success of the conversion is largely based on the data provided. Please be aware that not all data will be transferred. Information that is incorrect or corrupt in your previous system will not be corrected by the conversion. Therefore, some information will need to be manually entered. Verification of conversion data is dependent on supplied fax documents by end user.

Duplicate Patients:

Some Practice Management software will allow entry of patients and other information multiple times without warning of duplication. Due to the nature of the database conversion process, there are some items that you should review on the conversion evaluation to identify this duplication. One such item is the duplication of Patient records. To assist you in locating duplicate patients, the XLDent[™] Name and Address listing is provided during the evaluation process. Please contact your XLDent[™] representative with any questions regarding this process. We look forward to helping you with a smooth transition to XLDent[™].

Special Conversion Considerations:

Conversions are in constant development, in the event you have questions about data being converted or require special consideration. Please contact your XLDent[™] Representative.

Items that do not convert

Specific areas that will not convert include, but are not limited to, the following:

- ⊗ Periodontal Charting
- ⊗ Provider Accounts Receivable Distribution
- ⊗ Payment Plans/Contract Balances
- ⊗ Outstanding Insurance Claims
- ⊗ Archival History
- ⊗ Prescription Listing
- ⊗ Secondary Insurance
- ⊗ History
- ⊗ Treatment Plans
- ⊗ Referrals
- ⊗ Benefit Plans / Allowed Amounts

Notes on Conversions:

- A/R report in Softdent automatically filters out CIL accounts – XLDent[™] converts these and is included in the A/R report
- Softdent allows for service codes to have more than 5 characters as well as decimals. XLDent[™] allows only 5 digit service codes, therefore, when these codes are converted to XLDent[™], we convert the first 5 valid characters for that code.
- Inactive accounts with balances should be reactivated or written off prior to final conversion. This will be determined at the time of preliminary conversion.
- Softdent records up to 4 guarantors. We only convert Guarantor 1.
- Appointments will convert with a defaulted prophylaxis code. This can be manually changed after the conversion.

Below are some additional notes concerning some of the items that will or will not be converting.

Patient ID

A new patient identification number will be assigned for all patients. The patient id number in your previous system will not be converted.

Gender

When this is not converted or not entered into current system it will default to Male.

Marital Status

When this is not converted or not entered into current system it will default to Other.

Preferred Dentist

When this is not converted all patients will be assigned to the default doctor.

First Visit Date

When this is not converted or the patient does not have a first visit date, it will be assigned to the date of the conversion. This is done so the New Patient Report will be accurate for new patients entered into XLDent™. This can be manually changed.

Recall Frequency

When this is not entered into current system it will default to 0. This will have to be manually updated after loading the converted database.

Appointment Category on Appointment

When this is not converted the Appointment Category and Notes area will be blank. This can be manually updated after the conversion.

End of Month and End of Year will be processed during the conversion. You will be starting a new month and a new year after the conversion. You will want to maintain the End of Month and End of Year totals or reports from your previous system. At the end of the actual month and year, you will combine the totals from XLDent™ and the totals from your previous system to get an accurate Month to Date and Year to Date total.

If posting after conversion cutoff date in your existing practice management software, reports will be inaccurate for End of Month and End of Year due to duplicate entry.

Actual Data varies from dataset to dataset, visual representation may be different.
